

RAYNEX

ONE SUN. FIVE JOBS. PAID TO SAVE WATER.

A farmer-owned solar hub for 20 smallholders on 8 ha, piloted across three farm zones of Nashik. One Nashik. One Schneider-run array keeps the cold room safe, waters by the soil, freezes ice, dries onion dries onion and sells the rest; drones and robots join as a shared service. The DISCOM shares the shares the power cost it saves when the water stays in the ground.

💧 **1,960 m³**

Water Left In The Ground
per farmer a year, -35%

🍅 **752 kg**

Harvest Saved From Rot

No pump runs after dark

📊 Proof Before Payment

Meters, not trust

👥 Owners Before Automation

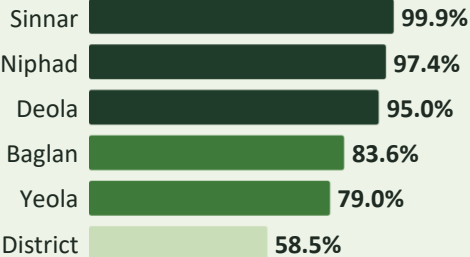

Recommend mode, one vote

Water, sun and harvest all leak for the same reason: the next unit costs the farmer nothing and saves him nothing.

Free marginal water, idle solar and no farm-gate cold cost India ₹2.8 lakh crore a year.

Leak 1: Water Nobody Pays For

Groundwater extracted, % of recharge, Nashik Nashik

Maharashtra pays ₹14,761 cr a year so 44.06 lakh pumps run free

Next hour of pumping costs the farmer ₹0; the DISCOM pays ₹5.54 a unit

States spent ₹1.89 lakh cr on power subsidy in FY25 (CAG)

India extracts 245.6 BCM a year; 11% of blocks over-exploited

→ Exhibit F2 Subsidy Graph, Slide 11

Leak 2: Solar That Sleeps

Standalone solar pump, days a year

Solar used on site, Dhundi pilot

Solar fixes the fuel bill but makes the next hour of pumping cheaper still

SKY paid for surplus power; selling water paid ₹6 to ₹8 a unit, so 60% kept pumping

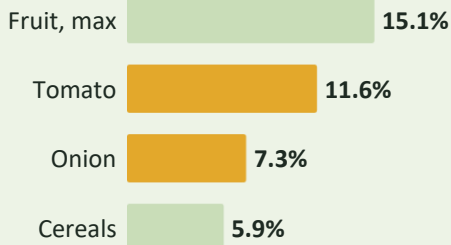

No battery the farmer can afford pump-sized lithium wrecks payback

215 idle days: the asset earns nothing for 59% of the year

→ Exhibit F4 Lessons Abroad, Slide 11

Leak 3: Harvest That Rots

Loss from field to market, % of output

Tomato is the worst vegetable; loss across crops ₹1.53 lakh crore a year

Nashik grew 58.8 lakh t of onion in 2024-25; Maharashtra is 35.5% of India

No farm-gate cold, so Ramesh sells at Lasalgaon on harvest day

What India loses a year, ₹ crore

→ Exhibit A5 Loss Baseline, Slide 12

E1: Problem Statement · Root Cause

First Principles: Six Questions

Why over-pump?

Power is free up to 7.5 HP, so the next hour costs him nothing

Who loses most?

The state, ₹1.3 lakh crore a year, so the state should pay for water saved

Why do tomatoes rot?

No farm-gate cold; the cheapest battery is a tank and ice

Why no adoption?

Cost, trust and reach: share the asset, speak the advice

Why is efficiency not enough?

Saved water gets spent on more land; cap the total, not water per ha

Who should own it?

The farmers, one member one vote: Denmark had 1,163 co-op dairies by 1909

Root cause: free marginal water, and saving it pays no one.

Climate Makes It Worse, Rails Make It Fixable

Monsoon 14 to 15% short in 2026, with more heat

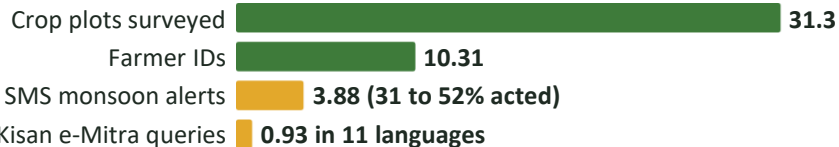

Farms: 40%+ of jobs, ~90% of freshwater

Schneider: 15 to 20% of produce value lost

Nashik alone spans 550 to 3,400 mm of rain

Digital rails already built, crore

One farmer-owned array, a Schneider router that sends every unit of sun to the job worth most, and a bonus for water saved.

Nine parts, one FPO owner, one DISCOM contract: every Schneider goal gets a number.

E2: Solution · E3: Alignment

The Hub, In Priority OrderExhibit A3, Slide 12

 1 Cold Room

5 t room guards up to 250 crates; 2,700 kWh

 2 Irrigation

Soil-gated drip, 8 zones; 15,430 kWh kWh

 3 Ice Store

Midday ice keeps the room cold at night

 4 Dryer

Onion and chilli; 300 kWh

 5 Grid Export

7,070 kWh at ₹3.05, plus the bonus

72% of the sun used on site, against 35% for a solar pump alone

Nine Components, One Contract

 C1

Energy Router

15 kWp, ATV320 drive, picks the load

 C2

Raised Array

3.5 m stilts over the nursery, ≤30% shade

 C3

Soil-Gated Drip

–35% water, +20% yield, 50 m³ tank

 C4

Bachat Bonus

DISCOM pays 50% of the subsidy saved

 C5

Cold-Chain Ladder

₹6,000 chambers, then a 5-tonne room

 C6

Plot Score

One 0 to 100 score per plot, daily

 C7

Drone Didi

SHG pilots spray only flagged patches

 C8

Voice First

Voice in 22 languages, from Marathi

 C9

FPO Operator

20 farmers, 8 ha, one member one vote

New: C1 router chooses the load itself, and C4 pays for water not pumped.

→ Exhibit F5 Blue Ocean, Slide 11

Schneider's Four Goals, Each With A Number

1

Cut Energy And Water Intensity

–35% water; 3.57 → 6.59 kg/m³; 100% solar

2

Minimise Post-Harvest Loss

Tomato loss 11.6% → 7.7%; 15.04 t saved per hub

3

Empower The Smallholder

₹0 capital, voice in Marathi, +₹32,460 a year

4

Strengthen Climate Resilience

Tank, ice, AquaCrop; 39,200 m³ a hub kept underground

 Aggregation, co-ops C9

Schneider's Condition, Answered

 **Software:** Energy router + Plot Score

 **Business model:** FPO-owned hub, Bachat Bonus, AIF loan

 **Farmer tools:** Missed call, voice, SMS, a village operator

Why Not A Simpler Fix?

Option	Sun Used On Site	Water	Harvest	Who Pays
Solar pump alone	35%, idle 215 days	Pumps more: 60% unchanged in SKY	No cooling	Farmer + subsidy
Free grid pump, today	0%	Floods at night, free	No cooling	State: ₹14,761 cr a year
Cold room alone	Grid power	No change	Loss cut	Farmer
RAYNEX hub	72%, five loads	–35%, capped by budget	Loss cut by a third	FPO, AIF loan, DISCOM bonus

Three design artifacts: a service blueprint for the season, the missed-call voice flow, and four offline app screens.

No smartphone needed: one missed call, one answer in their own language, one action a day.

E4: User Journey · D3: Design Artifacts

Service Blueprint: Five Lanes Through One Season

Exhibit F6 JTBD And Rogers, Slide 11

Lane	Before Sowing	Growing Season	Harvest	Off-Season
Farmer	Joins the FPO with his Farmer ID; voice onboarding	Morning voice call; approves or overrides (recommend mode)	Drops crates at the hub; hears sell-or-store	Input-cost alerts; books seed and fertiliser in bulk
Operator	90-second soil scan; installs probes at 15 and 45 cm	Clears alerts within 24 h; Pooja backs 5 hubs	Weighs every lot in and out on the platform scale	Cleans panels; services the cold room
Router, Edge	Loads the crop plan and the season water budget	Waters to the soil balance; caps pumping at budget	Cold room first, then ice store	Dryer runs, surplus exported
Cloud, Data	AquaCrop plan; NDVI zones from Sentinel-2	Plot Score 0 to 100, daily, per plot	Shelf life per lot; route and truck pooling	Season report and metered bonus proof
Partners	AIF bank loan; KVK Nashik	Drone Didi spray bookings	Lasalgaon buyers, eNAM	DISCOM pays the bonus; insurer gets consented data

Missed-Call Voice Flow: Marathi, Ahirani, Hindi At Launch

"Rameshrao, aaj zone 2 la 40 minit paani dya. Udya paavsachi shakyata 70 takke." takke." (Marathi: water zone 2 for 40 minutes; 70% chance of rain.)

out: Hold or sell, best market

No smallholder can own a drone or a robot; an FPO hub can, and rents them out by the acre, charged on the same solar array.

China flies 251,000 farm drones; India's Drone Didi scheme has delivered 1,094. A shared hub closes that gap. E6: Innovation · Automation Layer

Drones: Live From Year 1

Exhibit A9, Slide 12

Metric	Manual Knapsack	Drone, 10 to 16 L
Cost per acre	₹800 to 1,500	₹400 to 800
Water per acre	200 to 250 L	10 to 15 L, −94%
Speed	a day per acre	1 acre in 15 min

- ☉ Sprays only the weak patches the **Plot Score** flags; scouts with a with a multispectral camera
- ⚡ Batteries charge on hub solar at midday, when the router has surplus
- ₹ **Funding:** Namo Drone Didi **80%** up to ₹8 L; SMAM **75%** for FPOs FPOs
- 👤 Pilot earns ₹400 to 600 an acre; Igatpuri hub also hauls produce produce downhill

Robots: Phased In From Year 2

Y2 Spot-Spray Robot
Camera finds each weed or sick plant
Niqa: **1.48 lakh** acres in 2024-25, Akola, MH; MH; inputs −60%

Y3 Grading Line, Robot Arm
Sorts onion by size and rot into crates
Feeds shelf life per lot; cuts packing labour

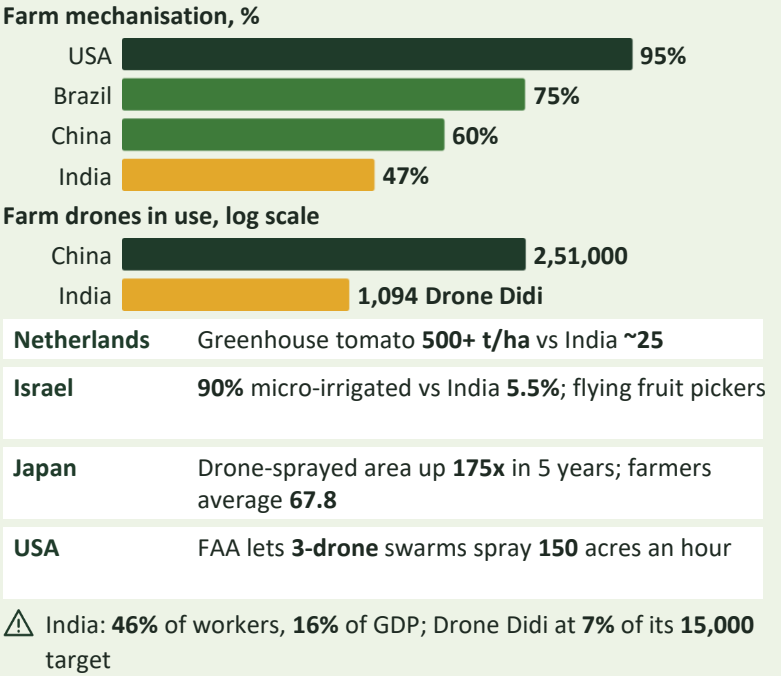

Y5 Autonomous Weeding
US See & Spray: **5 mn+** acres, ~50% less herbicide
Hired, never owned: the FPO runs a custom-hiring centre

- ↻ Plot Score flags a patch → app books a machine → it charges on hub solar → works → proof logged
- 🏠 AIF funds custom-hiring centres and drones; machines are AIF-eligible assets

India Vs The World

Exhibit F4, Slide 11

Automation Roadmap

Moves crates field to cold room

labour −30 to 40%

Y5 ☀ Weeding Robot

Rented across 25+ hubs

herbicide ~−50%

Pay To Save Water, And What It Returns

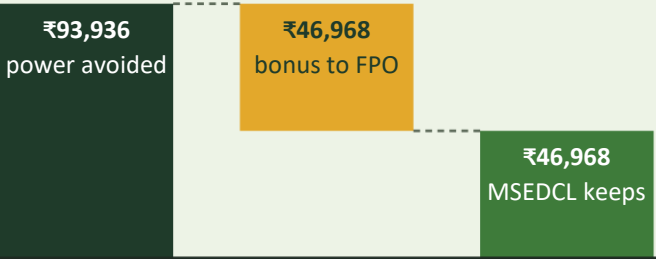

Baseline: a Niphad smallholder, tomato in kharif and onion in rabi, flood irrigation on a free-power grid pump, no farm-gate cooling.

A metered bonus makes saving the best move; a hectare returns ₹1,37,693 a year on 35% less water.

✓ E6 Innovation · D5 Benefit · E7 Impact

What Is New: The Bachat Bonus

Per hub: 16,956 kWh × ₹5.54 power purchase cost

- 1 Borewell sensor + flow meter set the season's m³ budget budget
- 2 Controller caps pumping at budget: no rebound
- ₹ 3 MSEDCL pays 50% of the saving; booked at ₹37,574

Gujarat SKY	Paid for power; 60% kept pumping
Punjab PBPK	₹4/kWh saved; 4.69% enrolled
RAYNEX	Metered, automatic, default-on
⚠	Bonus is only 3.4% of base benefit: payback 2.6 yrs without it

→ Exhibit F1 Payoff Matrix, Slide 11

Per Hectare Per Year, Against Baseline

Metric	Baseline	RAYNEX	Change
Water Pumped	14,000 m³	9,100 m³	−35%
Free Grid Power	2,120 kWh	0, solar	−2,120 kWh
Tomato Water Use	3.57 kg / m³	6.59 kg / m³	+ 85%
Yield, Tomato / Onion	25 / 18 t	30 / 21.6 t	+ 20%
Loss, Tomato / Onion	11.6% / 10%	7.7% / 6.7%	1.88 t saved
Energy Per Quintal	4.93 kWh	3.74 kWh	−24%
Grid Export	0	884 kWh	+ 884
CO₂ Avoided	n/a	2.14 t	2.14 t
Net Benefit	n/a	₹1,37,693	₹81,150 loan yrs

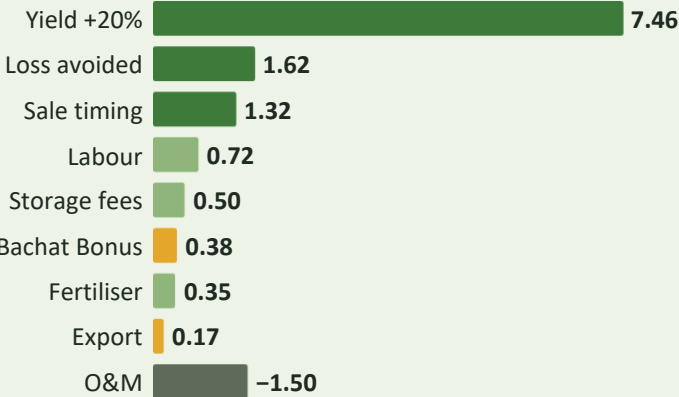

- 💧 Drip needs 10 m more head, so 35% less water saves 9% of pump energy; the sun supplies the rest
- ↪ Conservative (+10% yield, no bonus, no sale timing): ₹54,810 a hectare

→ Exhibit A1 And A4, Slide 12

Where The Money Comes From

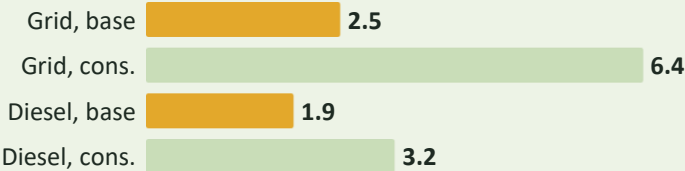

Exhibit A7, Slide 12

Per hub of 8 ha, ₹ lakh a year

Net, base ₹11.02 L	Net, conservative ₹4.38 L
-----------------------	------------------------------

Payback on ₹28.06 L net capex, years

Per Hub → At 500 Hubs

💧 Water 39,200 → 1.96 cr m³	🌿 CO₂ 17.1 t → 8,529 t	🍅 Food 15.04 t → 7,520 t	👥 Jobs 1.2 → 600	🏠 MSEDCL saves ₹4.70 cr
-----------------------------	------------------------	--------------------------	------------------	-------------------------

Every Player Gains
a year, per hub

👤 Farmer +₹32,460, then +₹55,077	👥 FPO Fee book ₹6.02 L	🏢 MSEDCL Net +₹46,968	🏦 Bank ₹25.25 L, Gol pays 3%	🌞 Rural Youth ₹15,000 a month	⚡ Schneider ₹1.2 L a hub	💧 Aquifer 39,200 m³ kept
--	---------------------------	--------------------------	------------------------------------	-------------------------------------	-----------------------------	-----------------------------

One district with three farm zones proves the hub works on every soil; existing schemes and a farm loan pay for it; partners each bring one part.

3 hubs in 3 Nashik talukas from April 2027, ₹0 farmer capital, 500 hubs by year 5.

D6: Deployment And Scale-Up · E8: Roadmap

Why Nashik: Three Zones, One District

Exhibit A8, Slide 12

📍 Hub 1: Igatpuri Western Ghat zone Red, lateritic soil · very high rain rain Groundwater safe Paddy on AWD + vegetables Tests: wet, hilly hub	📍 Hub 2: Niphad Plains, irrigated Medium-deep black soil Groundwater 97.4%, critical Onion, tomato, grape · Lasalgaon Tests: anchor grid hub	📍 Hub 3: Yeola Scarcity zone Shallow soil · low rain Groundwater 79.0%, semi-critical critical Onion, rainfed crops Tests: drought hub, farm pond
--	--	---

- 📖 Nashik spans 3 of Maharashtra's 9 agro-climatic zones and 550 to 3,400 mm of rain: a "mini-Maharashtra"
- 🕒 58.8 lakh t of onion a year and Lasalgaon, Asia's largest onion market; free power for 44.06 lakh state pumps

What It Costs And Who Pays

Exhibit A6, A7, Slide 12

Schemes ₹9.10 L

AIF loan ₹25.25 L at 6%, 7 years

Gross capex per hub ₹37.16 L; farmer capital ₹0FPO grant ₹2.81 L

☀️ **PV:** KUSUM 2.0, about ₹50,000 cr with 10 GW agri-PV, awaits notification; fallback Magel Tyala, 90%

💧 **Drip:** Per Drop More Crop, 55% for small farmers

❄️ **Cold room:** MIDH 35%; up to 75% stacked with RKVY (upside)

🏠 **Loan:** AIF, 3% interest subvention and a credit guarantee

₹ **Repayment:** fee ₹30,117 per farmer a year covers the ₹4.52 L instalment and O&M

Pilot of 3 hubs: ₹1.11 Cr gross, ₹84 L net of subsidy, all booked at 80%

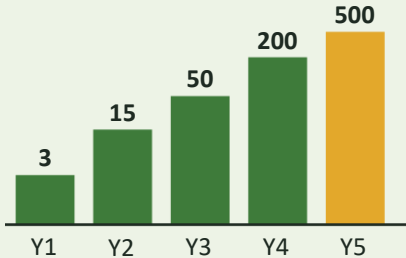

Partnerships, Each With A Fallback: No Grant Asked

Partner	Brings	Gains	Fallback

EXHIBITS F1 TO F8: THE FRAMEWORKS BEHIND THE CASE

Public policy, micro and macroeconomics, strategy and projections: why the state should pay, how much, and why the numbers hold.

F2 Microeconomics: The Subsidy Graph

Farm power: ₹/kWh vs kWh pumped

Gold arrow: the bonus pulls use back to Q*

- ⚡ **Free power:** the farmer pays ₹0, so he pumps to Q free, where the last unit is worth nothing to him
- ₹ **State's bill:** MSEDCL still pays ₹5.54 a unit; the state covers the box, ₹14,761 cr a year
- ⚠ **Deadweight loss:** every unit past Q* costs more than it is worth
- 🔧 **Our fix:** a Pigouvian subsidy on saving. Each unit not pumped earns ₹2.77, half of ₹5.54, so use moves back toward Q*

📄 **Evidence:** Punjab's ₹4 a unit cut pumping 7.5 to 30%

F3 Public Policy: How Much Should The State Pay?

Government Ledger, Per Hub	One-Time	Every Year
Capex: KUSUM 2.0, PDMC, MIDH	₹9.10 L	n/a
Power purchase avoided	n/a	+ ₹93,936
Bachat Bonus to FPO	n/a	− ₹46,968
AIF 3% subvention, GoI	n/a	− ₹75,756 Y1, falling
Net to MSEDCL	n/a	+ ₹46,968

🔧 **Our call:** no new capex money. Bonus = 50% of the metered saving, paid after the season

- 🎯 **Bounds:** cost of saving < bonus ≤ ₹93,936; 50% splits the surplus (Nash bargain)
- 💧 **Water price:** ₹0 → a shadow price of ₹1.20 per m³ saved (₹46,968 ÷ 39,200 m³)
- 🍅 **Food prices:** stored lots sell +₹3/kg off-peak, easing Lasalgaon gluts
- ⚡ **Power price:** MSEDCL buys day solar at ₹3.05, below its ₹5.54 average

💡 **Self-financing:** the state pays for water not used out of power it no longer buys; states spent ₹1.89 lakh cr on power subsidy in FY25.

F1 Game Theory: Payoff Matrix

FPO / MSEDCL payoff, ₹ per hub a year

	Bonus	None
Save	+46,968 / +46,968	0 / +93,936
Pump	0 / 0	0 / 0, today

🎯 Without a bonus, pumping is dominant; with one, (save, pay) is the Nash equilibrium

✅ MSEDCL pays only on proof

Who moves first: FPO grant and AIF fund 3 pilots → meters prove → MSEDCL signs → AIF lends hubs 4 to 50

🔄 **Repeated game:** a payout each season builds trust

F8 Projections And Viability

Market, ₹ crore, log scale

TAM	19,600
SAM	18,000
SOM	185.8

TAM: 49 lakh KUSUM pumps · SAM: 45 lakh Maharashtra farm pumps · × ₹40,000

Hubs Y1 to Y5: 3 · 15 · 50 · 200 · 500
Farmers: 60 → 10,000

Y5 revenue: bear ₹7.4 cr · base ₹14.2 cr · bull ₹21.5 cr

🔧 **MSEDCL at 500 hubs:** avoids ₹4.70 cr, pays ₹2.35 cr a year

🕒 **Viability:** ₹11.02 L a year on ₹28.06 L net: payback 2.5 yrs

F4 Lessons From Abroad And Home

Denmark	1,163 co-op dairies by 1909: copy one member, one vote
Israel	Quotas, block rates: copy the budget
Gujarat	Paid for power only: avoid
Punjab	4.69% enrolled, late pay: make it default, automatic
China	2.51 lakh drones on 178 mn ha: share machines

F6 JTBD And Rogers Diffusion

- 🔧 **JTBD:** sleep, safety, a job, a smaller bill
- ➡ **Rogers:** FPO board first; recommend mode to try; neighbour plots to see

F5 F7 Strategy, Macro, PESTEL

Now: KUSUM 2.0 pending

1 to 5 yrs: ₹50,000 cr, 10 GW agri-PV

5 to 15 yrs: free power ends 2029

P Free farm power **E** ₹1.89 lakh cr

S 82% smartphones **T** 22-language AI

E Aquifers falling **L** DPDP, ALMM-II

🎯 **7 Powers:** counter-position, switching costs, feeder data

🔧 **Porter:** rivals Ecozen, Fasal; barrier, the DISCOM contract

⭐ **Blue Ocean:** create the bonus, eliminate night pumping

✅ **Moat:** the DISCOM contract, not the box

EXHIBITS A1 TO A10: EVERY ASSUMPTION, IN ONE PLACE

Every number in slides 2 to 10 traces to a line here; (A) marks our model, the rest are published figures. Scheme money is booked at 80%.

A1 Baseline, Per Hectare

Crops	Tomato K, onion R
Flood Water, A Season	7,000 m³
Water A Year	14,000 m³
Pump Lift (A)	25 m
Grid Power A Year	2,120 kWh
Farm-Gate Cooling	None
Yield, Tomato / Onion	25 / 18 t
Energy Per Quintal	4.93 kWh

A5 Loss And Storage

Loss, Tomato / Onion (A)	11.6% / 10%
Loss Cut (A)	One-third
Food Saved Per Hub	15.04 t
Sale Timing, Stored	₹3/kg on 44 t
Storage Fees	₹50,000
Crates Guarded	250 × 20 kg
Cold Room Draw	15 kWh a day
Onion Loss, NABCONS	7.27%

A9 Manpower, O&M, Drones

Operator, Per Hub	₹4,000 a month
Technician, Per 5 Hubs	₹15,000 a month
Platform Fee	₹60,000 a year
Spray Drone, Certified	~₹10 L
O&M Total, Per Hub	₹1.50 L a year
Drone Didi Subsidy	80%, ₹8 L cap
Team Y1, Y3, Y5	5 / 12 / 35
Labour Cost Cut, Drip	30 to 40%

A2 Farm And Hub

Farmers Per Hub	20
Area Per Hub	8 ha
Ramesh's Plot	0.4 ha
Ramesh's Revenue	₹1,86,400
Hub Crop Revenue	₹37.28 L
Tomato Price	₹10/kg
Power To The Farmer	Free to 7.5 HP
FPO Equity Grant	₹2,000 a member

A6 Policy Money, Booked At 80%

KUSUM 2.0 Or Magel, PV	30%
PDMC, Drip	55%
MIDH, Cold Room	35%
Booked Subsidy	₹9.10 L
MSEDCL Power Cost	₹5.54/kWh
Bachat Bonus	50% of ₹93,936
Bonus Booked	₹37,574
Equity Grant Cap Per FPO	₹15 L

A10 Rollout And Revenue

Hubs Y1 To Y5	3, 15, 50, 200, 500
Integration Margin	₹3.7 L a hub
Schneider Hardware	₹1.2 L a hub
Voice, Per 3-Min Call	₹7 to 8
Install Window	Apr to Jun
Pilot Talukas	Igatpuri, Niphad, Yeola
Margin Money, 10%	₹2.81 L
Y5 Revenue, Base	₹14.2 cr

A3 Energy Model (A)

Array	15 kWp
Yield Per kWp	1,700 kWh
Generation A Year	25,500 kWh
Water, Cold, Dryer kWh	15,430, 2,700, 300
Export At ₹3.05, MSKVY	7,070 kWh
Pump Efficiency	45%
Grid CO₂	0.71 kg/kWh
On-Site Use Vs Dhundi	72% vs 35%

A7 Capex And Finance

PV, Pump, Drive	₹9.50 L
Drip ₹1.12 L/ha × 8	₹8.96 L
Cold Room, 5 t	₹12.00 L
Borewell, Tank; Sensors	₹2.5 L; ₹1.4 L
Dryer, Crates; Scale	₹2.5 L; ₹0.3 L
Gross / Net Capex	₹37.16 L / ₹28.06 L
AIF 6% For 7 Yrs: Loan	₹25.25 L
Instalment; Per Farmer	₹4.52 L; ₹30,117

A4 Water, Yield, Inputs

Water Saved, Base	35%
Yield Gain, Base	+20%
Yield Gain, Conservative	+10%
Drip Extra Head (A)	10 m
Fertiliser Saved	11% of ₹20k/ha
Labour Saved	30% of ₹15k/ha
Bulk Buying, Not Booked	10%
Pump Energy Saved By Drip	9%

A8 Variants

Diesel Saved, V2 Hub	₹4,53,600
V2 Payback	1.9 yrs
AWD Water / Methane Cut	30% / 48%
Membrane, V3	₹3.0 to 3.9 L/ha
Exchange Rate	₹87 per \$
Hill Subsidy, V4	50%
Agrivoltaic Yield Floor	80%
Diesel Hub CO₂ Saved	13.5 t

A11 Sensitivity: Payback In Years, Yield Gain × Cold-Room Cost

Yield	₹8 L	₹12 L	₹15.1 L	✓ Every cell pays back inside the 7-year AIF loan
10%	3.5	3.9	4.2	⚠ Weakest case, 10% yield and a ₹15.1 L room: 4.2 years
20%	2.3	2.5	2.7	🕒 No PV subsidy: 2.5 → 2.7 yrs; no bonus: 2.6 yrs
30%	1.7	1.9	2.1	₹ Conservative stack: 6.4 yrs grid, 3.2 diesel; farmer at break-even (–₹693)
